

Tushar Ashok Supanekar

Full Stack Software Engineer | Java · Spring Boot · React · Python

Worcester, MA | (774) 670-6527 | tusharsupanekar60@gmail.com | [linkedin.com/in/tushar-supanekar/](https://www.linkedin.com/in/tushar-supanekar/) | github.com/TusharSupanekar

Summary

Entry-level Full Stack Software Engineer with an MS in Computer Science from Clark University (GPA: 3.84, May 2026), seeking full-time software engineering roles. Builds and tests applications across Java, Spring Boot, Python, React, and PostgreSQL, with hands-on experience in REST APIs, microservices, containerization, and cloud deployment. Available immediately; open to relocating anywhere in the US.

Relevant Skills

Languages: Java (Java 17+), Python, JavaScript (ES6+), TypeScript, SQL.

Frameworks and Libraries: Spring Boot, Hibernate, JDBC, JPA, FastAPI, Node.js, React.js, Next.js, Vite, Material UI.

Databases & Architecture: PostgreSQL, MySQL, MongoDB, schema design, query optimization, dimensional modeling, ETL, Apache Airflow, Tableau, REST APIs, microservices, WebSockets, distributed systems, system design.

DevOps & Practices: Docker, Git/GitHub, CI/CD workflows, Vercel, Render, Supabase, automated testing, Locust, Agile/Scrum, code reviews, GitHub Copilot.

Professional Experience

Vosyn AI Inc (Remote - Canada): Front-End Developer Intern May 2025 - August 2025

- Designed, developed, and tested 10+ React + JavaScript components from Figma to production, collaborating with cross-functional product management, QA, and design partners in a 6–10-person Agile Scrum.
- Integrated RESTful APIs with Axios and SWR caching across 5+ data-heavy views, eliminating duplicate fetches and improving application performance under high-volume data rendering.
- Debugged complex technical issues across the codebase; conducted 20+ peer code reviews and participated in architectural discussions.
- Resolved dependency mismatches, module-level collisions, and upstream main-branch drift across personal and teammates' pull requests in a repo where automated lint, build, and test checks passed before merge, keeping the trunk deployable.

QSpiders and JSpiders (Mumbai, India): Trainee Full Stack Java Web Developer February 2023 - December 2023

Intensive 11-month industry-aligned training program focused on Java full-stack development through hands-on project work.

- Built an enterprise Restaurant Management System in Java and Spring Boot with SQL and React, leading a team of 6 across role-separated ordering, inventory, and billing modules; applied object-oriented design principles to cut order processing overhead 20%.
- Developed Library and Product Management Systems in Java with Hibernate and JPA, modeling 15+ entity relationships with referential integrity, optimized queries, and data consistency across all CRUD operations.
- Delivered 3 full-stack Java applications through the complete SDLC, from requirements and design through implementation, unit and integration testing, and deployment, with technical documentation at every stage.

Projects

Clark University: Exchange Trading and Order Matching Engine based on Time Priority January 2026 – April 2026

- Architected a scalable distributed order-matching backend using Python (FastAPI) and PostgreSQL, implementing a price-time priority FIFO algorithm to process concurrent submissions, achieving zero transactional errors under load by resolving race conditions.
- Built real-time WebSocket pipelines streaming 5 simultaneous live data feeds to a React + TypeScript dashboard with sub-second end-to-end latency; containerized the full stack with Docker and deployed across Vercel, Render, and Supabase.
- Load-tested with Locust across 50–100 concurrent users sustaining under 50ms response times; wrote comprehensive unit and integration tests covering API contracts, matching logic, and data integrity.

Clark University: Data Warehouse and ETL Pipeline September 2025 - December 2025

- Designed a star schema with one fact table and five conformed dimensions modeling rental transactions at single-transaction grain.
- Automated ETL with Apache Airflow DAGs, extracting from a normalized OLTP PostgreSQL source, deriving measures, and loading into an OLAP warehouse with dependency management and error recovery.
- Resolved role-playing date dimension ambiguity across three date foreign keys, correcting time-based aggregations in Tableau dashboards.

Clark University: Expense Tracker (Worcester, MA) August 2024 - December 2024

- Built a full-stack bill-splitting app with a team of 2 (Node.js, React, MongoDB) with per-user balance tracking across shared expenses.
- Designed a normalized data schema with write consistency, implemented session-based authentication, role-based access control, and 4 Chart.js dashboard views covering trend analysis, budget tracking, and settlement summaries.
- Delivered 15+ test cases covering login flows, access control, and data integrity across all core user flows.

Education

Clark University: Worcester, MA May 2026
Master of Science in Computer Science (STEM) (GPA: 3.84)

University of Mumbai: Mumbai, India May 2023
Bachelor of Engineering in Information Technology (GPA: 8.18)
